Contents

Foreword **1**
Registered Trademarks and Tradenames 4

Chapter 1
Optoelectronic Terminology and Concepts **7**
The Physical Basis of Light 8
The Inherent Problems of Optoelectronic Terms 8
The Conventional Terms of Optoelectronics 9
A History of Light and Photoelectrics 9
CHARACTERIZING VISIBLE LIGHT 10
The Problems Humans Inherit 10
Setting the Ground Rules 10
DEFINITIONS OF TERMS 10
The Relationship Between Radiant and Luminous Flux 11
A Practical Example of Using the CIE Curve 11
Three Highly-Practical Optoelectronic Terms 12
Incidance 12
Intensity 12
Intensity Measurements 14
The Three-Step Intensity Measurement Procedure 14
Sterance 14
Constraints and Historical Approaches to Light Measurement 14
Modern Approaches Still are Flawed 14
The Concept of Color Temperature 15
Special Lab Lamps 15
Using Foot-Lamberts 16
Photometry Terms 16
Measuring Photometry Parameters 18
In Summary 19
Chapter 1 Quiz **21**

Chapter 2
Optoelectronics Semiconductor Phenomena **23**
An Overview of Optoelectronics History 24
The Light Mechanism 24
Metals, Insulators and Semiconductors 26
The Nature of Light Emitters 27
The Absorption Process 27
Material Selection 27
Types of Emitters 27
Light Emitter Fabrication 29

Luminescence 29
Fluorescence 29
Phosphorescence 29
Injection Luminescence 30
Naturally Occurring Luminescence 30
Semiconductor Energy Gaps 30
An LED's P-N Junction 31
Recombination 31
Semiconductor Materials Used in LEDs 32
Direct vs. Indirect Bandgap Material 32
Enhancing Photon Emission in Indirect Gap Materials 33
Quantum Efficiencies of LEDs 34
Semiconductor Materials Processing 34
The LED's Structure 34
Transparent vs. Opaque Substrates 34
Temperature Effects on LEDs 35
Band Structure 35
Semiconductor Processing 35
Crystal Growth 36
The Bridgman Method 36
The Czochralski Method 36
LED Processing 36
Epitaxy 36
Wafer Fabrication 37
Encapsulation Materials 37
AIGaAs 37
Blue LEDs 39
The Three Types of AIGaAs LEDs 39
Comparison of Other LEDs 40
Chapter 2 Quiz **43**

Chapter 3
Measuring/Testing Optoelectronic Devices **45**
An Overview of Light Measuring Instrument Types 46
What a Light Intensity Meter Does and Can Possibly Do 46
Testing Visible LEDs 50
Practical Considerations 51
Testing Radiometric IR LEDs 52
Correcting for the Law of Cosines 52
Reflectance Factor 52
Index of Refraction 53
Using the Proper Spectral Filters and Detectors 53
Testing Optical Communications 54
Testing the Tester 55
Testing Photographic Exposure Settings 56
Measuring Pulsed-Light in Conjunction with an Oscilloscope 57
Calibration and Measurement 57

Testing Industrial CRTs in a TV Station 59
Monitor Luminance 60
Making Actual Measurements 61
Photometers and Calibrated Photodetectors 62
More Modern Optoelectronic Measuring Instruments 63
Chapter 3 Quiz **65**

Chapter 4
Visible Light Emitting Sources **67**
An Overview Sampling of Experiments 69
TYPES OF VLSs 69
LED Lenses 69
LED Sizes and Series Resistors 71
LED Packages 72
Specialty and Evolved LEDs 72
Correcting Some LEDs' Viewing Angle Problem 73
LEDs With Silver Leads 74
Techniques for Handling Silver Plated LEDs 75
Solders, Flux and Cleaners for Silver Plated LEDs 75
COMPETING VLS TECHNOLOGIES 76
Incandescent Lamps 76
Neon Lamps 77
Halogen Lamps 78
THE EXPERIMENTATION PC BOARDS 78
The BCG Board 79
The Single and Dual LED Driver Board 81
The 7-Segment LED Driver Board 81
Design Basics 82
Wave Shaping and Duty Cycle Theory 82
The Transistor-Based Astable Oscillator 84
The 555 Timer Oscillator 87
The Op Amp Tutorial 90
Functions of the Op Amp Oscillator's Components 90
Circuit Operation 91
Design Steps and Consideration 93
Don't Be Blinded By the Light 94
EXPERIMENTING WITH LEDs 95
Power Strobing LEDs 95
DRIVING SINGLE, DUAL AND ARRAYED LEDs 98
Driving Single and Dual LEDs 98
Your Eye's Color Preference vs. LED Efficiencies 99
Mixing Dual LEDs' Colors 100
Enhancing a Dual LED's Color Resolution 100
Proving the Eye's Bias Toward Green 101
Driving Arrayed Series Connected LEDs 101
AC LED Applications 102
Driving LEDs in Series and Parallel 104
The Bar Graph Mode 105

The Moving Dot Mode 105
Subtle Design Considerations 106
Preparing for the LM3914 107
BAR GRAPH DRIVING 107
The LM3914 Bar Graph Display Driver 107
The LM3914 More Efficiently Driving Bar Displays 108
"Dithering" the LM3914 110
Transition from the LM3914 to the 7447 110
SEVEN-SEGMENT LED DISPLAYS 110
The Basis of Operation 110
Limitations of the 7447 and its Solutions 113
Detecting Decimal Numbers From Segments 114
Multiplexing 7-Segment Displays 115
5 X 7 DOT MATRIX LED DISPLAYS 116
Basic Memory Concepts 117
Registers 117
Addresses 117
Decoding 117
Programming 118
Memory Types 119
Types of ROM 119
An EPROM's Optical Properties 120
Tri-State[tm] Memories 120
Fundamentals of 5 x 7 Dot Matrix LED Displays 120
Physical Appearances 120
Types of 5 x 7 Dot Matrix Displays 121
Memory Capacities and Types of ASCII Character Sets 121
Contrasting the Two Different Types of Memory-Based Drivers 121
Understanding the EPROM-Based Driver 122
Programming the RAM-Controlled Dot Matrix Driver 123
Chapter 4 Quiz **129**

Chapter 5
Photocells, Photodiodes and Photomultipliers **137**
Photosensor Theory 138
Photovoltaic Based Solar Energy 139
Specially Made Photosensors 139
Advances in Materials Science 139
Concentrators 139
A Solar Array Controller 140
Maximum Power Tracking 141
Photosensors 143
Photocells 143
Color Temperature Response 144
Sensitivity 144
Photocell Uses 144
Basic Theory 145

Blackbodies 146
Special Response 147
Slope Characteristics 147
Resistance Tolerance 148
Dark Resistance 148
Speed of Response 148
A Photocell's Light History 148
Maximum Power & Material Types 149
Measuring Light Resistance 149
Spectral Output of Common Light Sources 150
Spectral Matching of LEDs and Photocells 150
Spectral Response Matching Applications 151
The Lamp Controller 152
Film Speed Monitor 152
PHOTODIODES 153
Silicon Photodiode Structure 153
The Photodiode's Structure 154
Biasing 156
Biasing of Non-Semiconductor Vacuum Photodiodes 156
Responsitivity 157
Spectral Response 157
Quantum Efficiency 158
Temperature Effects 158
Noise Equivalent Power (NEP) 159
Response Time 159
Photodiode Applications 160
Overcoming Load Resistance 160
IR Sensing Cards 161
Photomultiplier Tubes 162
Chapter 5 **165**

Chapter 6
Color Display Systems (CRT) **167**
THE THREE MAIN TYPES OF COLOR CRTs 168
The Penetron Tube 168
Obtaining Different Penetron Beam Energies 168
The Color Write Through System 168
The Shadow-Mask Tube 171
COLOR DISPLAY SYSTEMS 172
Refresh Vectors 172
Vector Storage 173
Raster Refresh 173
CHARACTERISTICS OF COLOR GRAPHIC DISPLAYS 174
IMAGE QUALITY CHARACTERISTICS 174
Addressability 174
Design Trade-Offs 175
Video Amplifiers 175
?? ??

Raster Display Limitations 176
Image Artifacts 176
Moire Patterns 176
COLOR QUALITY CHARACTERISTICS 177
Brightness 177
Contrast 177
Color Purity 178
Quiz Chapter 6 **179**

Chapter 7
LED Secondary Optics: Accessories, Lenses and Optical Filtering **181**
LIGHT FILTER THEORY 182
Contrast and Contrast Ratio 182
Display Illuminance Contrast Ratio 186
Magnification 187
ACTUAL LIGHT FILTERS 187
Plastic Filters 187
Optical Glass Filters 187
Combination Filters 188
Louvered Filters 189
Circular Polarizing Filters 190
SPECIAL LIGHT FILTER END PRODUCTS 190
Night Vision Goggles 190
Figure of Merit 193
Helping Factors 193
Night Vision Filters 193
THE LIQUID CRYSTAL SHUTTER DISPLAY 193
Changing Monochrome CRTs to Color 193
A History of Frame Sequential Color Displays 194
SECONDARY OPTICS 194
Light Pipes 194
Quiz Chapter 7 **201**

Chapter 8
Basic Optical Math and Concepts of Optics **203**
The Basics of a Lens 204
Optical Formulae 204
Lens Types 206
Other Important Optical Properties of Materials 210
The Relationship Between the Source and Emitter's Distance 213
Lens Pairs 213
Mirrors 213
Mirror Precautions 213
Prisms and Diffraction Gratings 215
Reflectors 215
Lens Surface Coatings 217
Filters With Blocking Glass 219

Welcome to the field of optoelectronics — an exciting technology which is useful, vitally important, rapidly emerging, and constantly evolving. Optoelectronics, Vol. 1 is a comprehensive and practical coverage of optoelectronics for readers of all levels of experience.
Optoelectronics, Vol. 1 walks you through the field of optoelectronics at your own pace and allows you to verify your progress. This book gives you a thorough understanding of optoelectronics, and bridges the gap between theories and more practical aspects and applications. Equations are used only when no other means of explanation can clearly illustrate a point.
Topics covered in Optoelectronics, Vol. 1 include:
- Terminology and Concepts
- Measuring and Testing
- Visible Light-Emitting Sources
- Photocells, Photodiodes and Photomultipliers
- LED Secondary Optics
- Basic Optical Math
AND MUCH, MUCH MORE!
About the Author:
Vaughn Martin
is a senior electrical engineer with the Dept. of the Air Force. Previously he worked at Magnavox and ITT Aerospace/Optics where he acquired his fascination with optoelectronics. He has published numerous articles in trade, amateur radio, electronic hobbyist, troubleshooting and repair, and optoelectronic magazines.
